SMT Reflow Soldering Instructions

1.Reflow soldering is not can do two times

2.When soldering , do not put stress on the LEDs during heating .

3.Product is highest resistant to 260°C , reflow but suggested the highest temperature of 240°C within .

Soldering iron

- 1.When hand soldering, the temperature of the iron must less than 300°C for 3 seconds
- 2.The hand solder should be done only one times

Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of LEDs will or will not be damaged by repairing.

Storage

The package is sealed:

- 1.The LEDs Should be store at 5°C~30°C and 90% RH or less.
- 2.It is recommended that SMD out of their original packainq are used within one year.

The package is opened:

- 1.Completed within 168 hours.
- 2.Stored at 5°C~30°C and 60% RH or less.
- 3.LEDs stored more than 168 hours should be baked at about 60°C±5°C for at least 20 hours before solder assembly.

Handling Precautions

1.Do not stack together assembled PCBs containing LEDs. Impact may scratch the silicone lens or damage.

2.Not available in the situation of acidity for PH.
